## IGNITION TEMPERATURE - TEMPERATURE CLASS

The ignition temperature is influenced by various factors such as size, shape, type and composition of a surface. In IEC 79-4, IEC, CENELEC and other standards the authorities have agreed on a "procedure for the determination of ignition temperature" with a limit approaching the lowest possible value. The gases and vapours are classified into temperature classes. In accordance with these temperature classes, electrical equipment is tested for its maximum surface temperature to ensure that the possibility of ignition due to the surface temperature is excluded in normal and abnormal operation. The standards specify to which extent these standard values may be exceeded and determine the necessary safety margins.

### Temperature class

Examples of the categorisation of gases and vapours in temperature classes and explosion protection subgroups.

	<b>T1</b>	<b>T2</b>	<b>T3</b>	<b>T4</b>	<b>T5</b>	<b>T6</b>
<b>IIA</b>	Methane	Propane	Petrol	Acetaldehyde		
<b>IIB</b>		Ethylene	Diethyl-ether			
<b>IIC</b>	Hydrogen	Acetylene				Carbon disulphide

## MAINTENANCE OF EXPLOSION PROTECTION

Maintenance of explosion protection during operation. Electric machines must be protected against overheating due to overloads. The type of protection depends on the type of operation as well as the electric machine and its use. Explosion-proof electric motors are usually certified for S1 type of operation, i.e. continuous operation. Other duties are allowed only if the temperature of the motor is controlled by reliable devices.

<b>Duty type</b>	<b>Type of protection</b>
<b>S1*</b>	<b>A</b> Motor safety switch according to IEC 60034-1 (VDE 0165/9.83) <b>B</b> Motor safety switch and temperature sensors in windings as additional protection. <b>C</b> Only temperature sensors as major protection only allowed if motor is tested and certified and if all control devices (power supplies) used are certified.
<b>S2/S3*</b>	<b>D</b> Motor safety switch with switch-on time control and/or temperature sensors in windings as additional protection. <b>E</b> Temperature sensors in windings as major protection. Only allowed if motor is tested and certified and if all control devices (power supplies) used are certified.
<b>S4, S5, S6, S7, S8*</b>	<b>F</b> Temperature sensors in windings. Motor must be tested and only certified control devices may be used.
Power supply by means of frequency converters	<b>G</b> Thermal protection of motor by means of sensors in windings is allowed as the only (independent) protection if motor is tested at all power supply frequencies, maximum voltage and S1-S7 (S8) types of operation. <b>H</b> If motor protection and converter are tested and certified as a unit.

\* For explanation of duty cycles see chapter "duty cycles".

Temperature class	Ignition temperature range of mixture	Permissible surface temperature of electrical equipment	Permissible temperature rise
T1	> + 450 °C	+ 450 °C	+ 410 °C
T2	> + 300... ≤ + 450 °C	+ 300 °C	+ 260 °C
T3	> + 200... ≤ + 300 °C	+ 200 °C	+ 160 °C
T4	> + 135... ≤ + 200 °C	+ 135 °C	+ 95 °C
T5	> + 100... ≤ + 135 °C	+ 100 °C	+ 60 °C
T6	> + 85... ≤ + 100 °C	+ 85 °C	+ 45 °C

Explosion-protected electric motors are used in industrial plants with a potentially explosive atmosphere containing inflammable fumes (vapours) or gases (i. e. chemical industry, oil refineries...) as well as in mines where methane is present. These are the three-phase, asynchronous electric motors with short-circuit rotor, explosion protected according to the CENELEC EN 60079-0, EN 60079-1, EN 60079-7 (IEC 60079-0, IEC 60079-1) standards. The enclosures of electric motors are designed to be "flameproof" according to EN 60079-0 (IEC 60079-1). The terminal boxes could also be in "flameproof" design or also in "increased safety" design according to EN 60079-7 (IEC 60079-7).

The following regulations and standards have been considered in designing, manufacturing and testing of electric motors:

Standard	IEC international	EN-CENELEC Europe
Rotating electric machines - classification of insulation materials for electric machines	IEC 60034-1	EN 60034-1
Climatic protection (IP number) Protection against harmful contact and ingress of solids	IEC 60034-5	EN 60034-5
Cooling devices for electric machines	IEC 60034-6	EN 60034-6
Construction and mounting of electric rotating machines	IEC 60034-7	EN 60034-7
Marking of terminals and directions of rotating of electric machines	IEC 60034-8	EN 60034-8
Noise levels	IEC 60034-9	EN 60034-9
Starting performances of short-circuit motors at 50 Hz and voltages up to 660 V	IEC 60034-12	EN 60034-12
Limited vibration levels for electric machines	IEC 60034-14	EN 60034-14
Relation between terminal sizes and ratings of three-phase short-circuit surface-cooled electric motors	IEC 60072-1, DIN 42673/3	
Relation between terminal sizes and ratings for arrangements: IM B5, IM B10, IM B14	IEC 60072-2	

## European Directives

Description	Directive
Directive for explosive atmospheres (ATEX)	94/9/EG, 1999/92/EL
Electromagnetic Compatibility (EMC)	2004/108/EG
Low Voltage Directive (LVD)	2006/95/EG
Machinery Directive	2006/42/EG
Packing and packaging waste	2005/20/EG

## CONSTRUCTION

Explosion protection standards taken into consideration during manufacturing and testing

Standard	IEC international	EN-CENELEC Europe
Electric devices operating in explosive atmospheres Standard type	IEC 60079-0	IEC 60079-0
Electric devices operating in explosive atmospheres flameproof "d"	IEC 60079-1	IEC 60079-1
Electric devices operating in explosive atmospheres Increased safety "e"	IEC 60079-7	IEC 60079-7

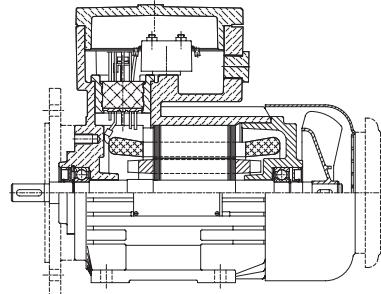

Electric motors are of totally enclosed, fancooled (blow-over) type. Cooling is provided by fans blowing external air over the ribbed ou side surface (cooling system IC 411 according to IEC 60034-6 or EN 60 034-6). Electric motors up to 250 frame size are made of grey cast iron. Motors frame sizes of 280 and 315 are made of welded housing and the terminal boxes of grey cast iron.

### Bearing lubrication

The following table lists the bearings used in the different motors. The bearings last about 20.000 hours in 4, 6 and 8 pole motors if the loads do not exceed the values indicated in the tables on pages 12 and 13. Only the latest and most innovative bearings of known producers have been used in our motors. On customer request we equip the motors with other bearings (depends on the respective construction!). The rotors are standard constructions and fixed on the D-end (frame size 71 mm to 250 mm) and NDE-end (frame size 280 mm to 315 mm).

Motors are normally fitted with permanently greased bearings of Type 2Z. According to experience the filled in grease will be sufficient for several years.

### Motors fitted with grease nipples

Motors from frame size 160 and above can be fitted with regreasable bearings. For motors with lubrication system we recommend not to exceed lubrication interval of two years in any case. Lubricate the motor when operational. If the motor is fitted with a lubrication plate, use values given, or use values given in the table below. These values are according to L1 – principle. The effectiveness of motor lubrication should be checked by measuring the surface temperature of bearing endshield during normal operating conditions. If the measured temperature is +80 °C or above, the relubrication intervals must be shortened. Relubrication interval should be halved for every 15 K increase in bearing temperature. If this is not possible then use the lubricants suitable for high operation temperature conditions.

### Ball Bearing: Lubrication intervals in duty hours

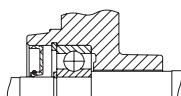

Frame size	Amount of Grease [g]	Speed of the motor [ $\text{min}^{-1}$ ]					
		3600	3000	1800	1500	1000	500
160	25	7000	9500	14000	17000	21000	24000

4KTC 280

4KTC 315

At an ambient temperature of  $\leq 25^{\circ}\text{C}$ , twice the grease life can be expected, however, 33000 hours at a maximum. In case of frequency converters and in continuous operation at very low speeds, as well as at low temperature, the lubrication capabilities of standard greases may not be sufficient and special greases with additives are needed. If motors are equipped with sealed bearings (i. e. bearings greased for life) any deviation in the operating temperature from design temperature will result in a change in lifetime of bearings. The use of conductive greases for elimination of bearing currents is not recommended due to their poor lubrication characteristics and low conductivity. Regreasing or replacement of greases is only allowed with grease quality of the same kind (same saponification component or consistency).

## Shaft ends

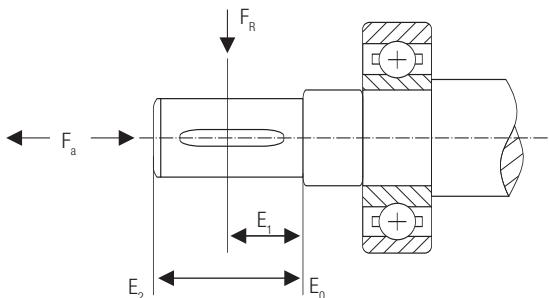

The standard electric motor is equipped with one free shaft extension. On request we also supply versions with free shaft extensions on both sides. The dimensions of the shaft ends correspond to the IEC 60072 (1971) standard, fifth edition. Tolerances for shaft end-diameters are in accordance with DIN 7154:

- up to diameter of 50 mm/ISO k6
- more than 50 mm/ISO m6

Free shaft extensions are equipped with keyways. Keyway and key correspond to DIN 6885. The shafts have a threaded central hole for the drawing in, drawing out and fixing connections.

Shaft diameter	14 mm	19 mm	24 mm	28 mm	38 mm
Internal thread	M5	M6	M8	M10	M12
Shaft diameter	from 42 to 48 mm	from 55 to 80 mm	from 90 to 100 mm		
Internal thread	M16	M20	M24		

Permissible loads on free shaft end

315	3.58	4.51	5.17	5.69	2.33	2.31	2.01	2.55	6.09	8.15

The load rating of bearings has been calculated for at least 20 000 operating hours at a frequency of 50 Hz. Only the axial loads have been considered. If the load is made up of axial and radial loads, the working life of the bearings is shorter.

### Maximum noise level $L_{dB}$ allowed at 1 m distance from the machine surface, Values for fan-cooled (blow-over) machines; IP 44

Power ratings P (kW)	Rotation speed min <sup>-1</sup>					
	600 < n ≤ 960	960 < n ≤ 1320	1320 < n ≤ 1900	1900 < n ≤ 2360	2360 < n ≤ 3150	3150 < n ≤ 3750
P ≤ 1.1	67	70	71	74	75	79
1.1 < P ≤ 2.2	69	70	73	78	80	82
2.1 < P ≤ 5.5	72	74	77	82	83	85
5.5 < P ≤ 11	75	78	81	86	87	90
11 < P ≤ 22	78	82	85	87	91	93
22 < P ≤ 37	80	84	86	89	92	95
37 < P ≤ 55	81	86	88	92	94	97
55 < P ≤ 110	84	89	92	93	96	98
110 < P ≤ 220	87	91	94	96	98	100

### Vibrations

The noise level of electric motors is below the limits prescribed by the IEC 60034-9 recommendation for fan-cooled (blow-over) electric machines. The rotors of electric motors are dynamically balanced with installed fan and 1/2 key. Vibration amplitude corresponds to grade A according to IEC 60034-14 (ISO 2373-N grade).

### Limit values for the vibration of electric machines (IEC 60034-14)

Vibration grade	Shaft height [mm]	56 ≤ H ≤ 132	132 < H ≤ 280	H > 280
	Mounting	Velocity [mm/s]		
A	Free suspension	1.6	2.2	2.8
	Rigid mounting	1.3	1.8	2.3
B	Free suspension	0.7	1.1	1.8
	Rigid mounting	-	0.9	1.5

Grade "A" applies to machines with no special vibration requirements

Grade "B" applies to machines with special vibration requirements

### Terminal box

The terminal box is fitted to the top of the motor with the cable entering from the fan end of the motor. It can be repositioned in steps of 90° to 180° to suit the application. The motors with direct starting are equipped with 3 connection terminals. 6 connection terminals are fitted to Star-Delta, two speed and dual voltage machines. The electric motors with sizes 71 to 132 inclusive and Ex e terminal boxes have 6 additional connection terminals for PTC sensors, heaters etc. The motors with Ex d terminal boxes are also equipped with 6 connection terminals. Exception is the 71 motor with only 4 connection terminals. Each terminal box has one connection terminal for the protective conductor. Ex d terminal boxes include a threaded entry to accept Ex d cable glands (see table below). Ex d thread reducers or adaptors can be included as an option for other thread sizes and thread forms.

### Terminals for supply cable and cable entries

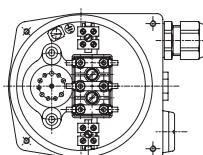

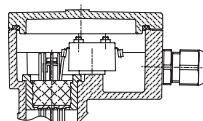

Frame size	Terminals for a max. cross section of supply cable (mm <sup>2</sup> )	Cable entries for main connection		
		Ex e terminal box	External diameter of supply cable	Cable entries (without cable glands)
63	2.5	1 x M20 x 1.5	6 to 13	1 x M20 x 1.5
71	2.5	1 x M20 x 1.5	6.5 to 12	1 x M20 x 1.5
80	4	1 x M25 x 1.5	10 to 17	1 x M25 x 1.5
90				
100				
112	4	1 x M32 x 1.5	13 to 18	1 x M32 x 1.5
132	4	2 x M32 x 1.5	13 to 18	2 x M32 x 1.5
160	16	2 x M40 x 1.5	17 to 28	2 x M40 x 1.5
180				
200	16	2 x M50 x 1.5	23 to 38	2 x M50 x 1.5
225				
250	95 to 300	2 x M63 x 1.5	31 to 48	2 x M63 x 1.5
280				
315				

Additional one cable entry (gland) M20 x 1.5 for PTC

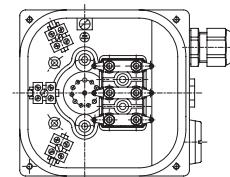

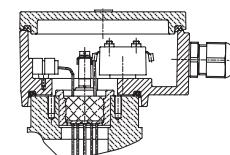

Increased safety terminal boxes incl de Ex e cable glands in accordance with EN 60079-0, and EN 60079-7. The empty entries are fitted with suitably certified stopping plugs. Additional entries can only be made in our factory under strict quality procedures. The Ex d terminal may receive additional threaded holes (NPT, ISO 7/1) by means of adapters. One threaded hole M20 x 1.5 is provided on the Ex d terminal boxes for the thermal protection and for heaters. Ex e terminal boxes have an additional cable gland M20 x 1.5 for cable diameters of 6 to 12 mm.

### Ex e version 4 KTC

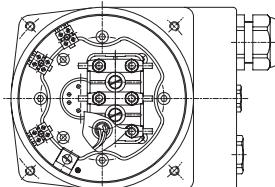

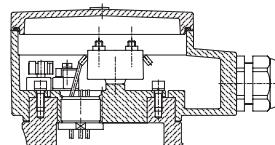

Frame size: 63 mm to 71 mm

## IP protection

IP protection of electric motors corresponds to IP 55. Motors with a higher degree of IP protection are manufactured on special request.

### Protection against environmental influences, IP protection

IP protection	Protection against harmful contact and ingress of solids (1st Numeral)
IP 44	Protection against direct contact with electrically live and rotating inner parts using tools, wire or similar objects with a diameter exceeding 1 mm. Protection against ingress of solids (diameter > 1 mm). Fan air outlets and water exhausts may have a second-degree level of protection.
IP 54/IP 55/IP 56	Complete protection against contact with electrically live and moving rotating inner parts. Protection against harmful ingress of dust. Ingress of dust is not fully pre-vented, but must not reach an extend causing harmful effects to machine operation.
IP 65*	Complete protection against contact with electrically live parts and rotating inner parts. Protection against ingress of dust (dust-proof machine).
IP protection	Protection against ingress of water (2nd Numeral)
IP 44/IP 54	Water particles spraying from any direction do not have any harmful effects on the machine (i. e. rain).
IP 55/IP 65*	A jet of water spraying from any direction does not have any harmful effects on the machine.
IP 56	During rough seas water must not penetrate into the interior of the motor to such an extend as to cause damage to the machine (deck-mounted motors).

\* All vertically-mounted electric motors with free shaft extension on the top must be protected against particles falling into the fan cover.  
This protection is not necessary if the machine itself has such a protection. Electric motors mounted outdoors must be protected against exposure to direct sunlight.

### Coating - Surface protection against environmental influences

	Anti-corrosion protection 2 (standard)	Anti-corrosion protection 3 (special)	Special surface protection
Surface	sanding and degreasing	sanding and degreasing	
Undercoating	Avtol	Avtol	
Intermediate Coating 1	-	Epoxy	
Intermediate Coating 2	-	Epoxy	
Finishing	Korvin	Epoxy	
Total thickness (mm)	80	140	
Colour*	blue RAL 5010	blue RAL 5010	
Protection against corrosion in environments with water	high humidity, steam, sea water	high humidity, steam, sea water	
Environments resistance	periodic spilling or spraying of anorganic acids and lyes	periodic spilling or spraying of anorganic acids and lyes	
Suitable for	normal industrial atmospheres, relatively high humidity and high content. of salt and aggressive gases ( $\text{SO}_2$ , $\text{NO}_x$ )	Chemically aggressive atmospheres, high content. of salt and aggressive gases ( $\text{SO}_2$ , $\text{NO}_x$ ). Condensation of moisture and electrolytes on surface. Solvents and oil derivatives have negative effects.	

\* Mining industry: yellow RAL 1003 for 500 V, grey RAL 9003 for 1000 V

The types of electric motors and their symbols are prescribed by the IEC 60034-7, EN 60034-7 standards. Motors are manufactured following the basic IM B3, IM B5 and IM B14 types. Table 4 shows the symbols and mounting arrangements for the standard models manufactured by our company. IM B3 type motors can also operate in IM B6, IM B7 and IM B8 mounting positions.

IEC code I	IM B3	IM B5	IM B34	IM B14	IM B35
IEC code II	IM 1001	IM 3001	IM 2101	IM 3601	IM 2001

**Power, voltage and frequency**

The power ratings given in the tables are valid for operation under uniform, continuous load (S-1 according to IEC 60034-1, EN 60034-1) at a rated voltage, a frequency of 50 Hz, temperatures of up to +40 °C and an altitude of less than 1 000 m above sea level. The data in the tables refer to 400 V, but motors have been designed for 380 V and 415 V. Voltage or frequency variations of +/- 5 % are allowed; within these limits the power ratings remain unchanged and the maximum winding temperature is not exceeded. Versions using 110 V to 1 000 V and frequencies of 50 or 60 Hz are available on special request. 50 Hz, 380 V, 400 V, 415 V electric motors may also be connected to 440 V to 480 V and a frequency of 60 Hz. Then the maximum load can be increased by 15 % and the number of revolutions by approximately 20 %. If a 50 Hz, 380 V, 400 V, 415 V electric motor is connected to a 60 Hz line, its maximum load may not exceed the nominal power. The number of revolutions increases by 20 %, while the starting and maximum torque decreases by approx. 18 %.

**Overload, efficiency and power factor**

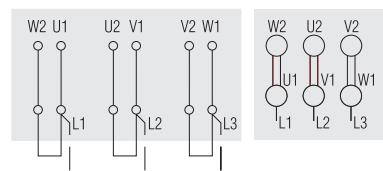

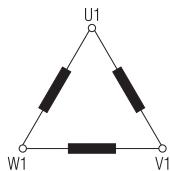

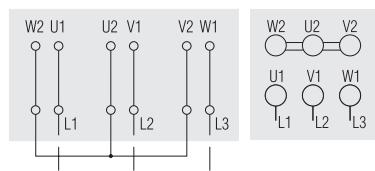

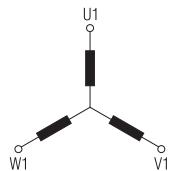

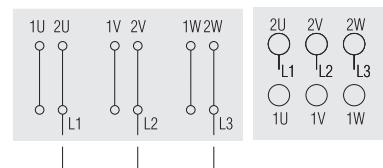

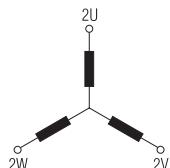

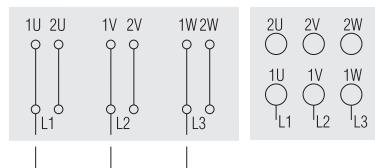

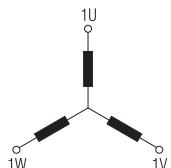

Electric motors heated to the operating temperature limit resist to a 2-minute overload of 1.5 In without being damaged. Variations between the 5/4 and 3/4 of the rated load have no essential influence on efficiency and power factor.

Efficiency $\eta$ (%) of the rate load				Power factor $\cos \varphi$ of the rate load			
5/4	4/4	3/4	2/4	5/4	4/4	3/4	2/4

Materials of thermal class F are used for the production of stator windings. They are designed to withstand an overtemperature of 80 K at a maximum ambient temperature of +40 °C. Electric motors operating under heavy conditions, conditions requiring frequent start-ups or ambient temperatures above +40 °C employ special insulation (thermal class H) and are available on special request. Windings of electric motors rated up to 3 kW are connected via star, while those of high-rated motors employ delta connection. Two-speed motors with 2:1 speed ratio use Dahlander windings. Electric motors with a pole relation of 4/6 or 8/6 have two separate stator windings in star connection.

**Installation instructions**

for the mains connection and start-up of motors with Ex d terminal box. Connect the motors via suitable cable and line entries that correspond to the EN 60079 directives, paragraphs 12.1 and 12.2 and have a separate test certificate. Unused openings must be closed as prescribed by EN 60079, paragraph 12.5. Cable and line entries (heavy-gauge conduit threads) and sealing plugs that do not meet these requirements must not be used.

Electric motors are tested in accordance with IEC 60034-2, EN 60034-2 regulations. All nominal and start-up value deviations are within the limits prescribed by IEC 60034-1, EN 60034-1. The explosion-proof enclosure is tested according to the IEC 60034-1, EN 60034-1 regulations. All enclosure parts are tested with a water pressure of 1 000 kPa.

## Rated values under extreme working conditions

When electric motors are used at temperatures above +40 °C or at altitudes of more than 1 000 m, the permitted overtemperature for windings is lower; the rated power is reduced respectively. The relation between rated power and ambient temperature altitude is shown in the diagrams.

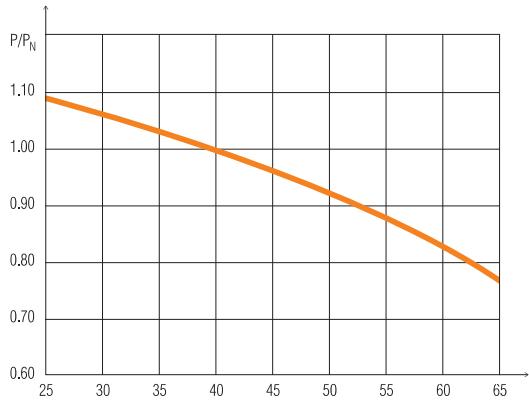

## Tolerances of rated values

The rated values shown in the tables may vary according to IEC 60034-1, EN 60034-1.

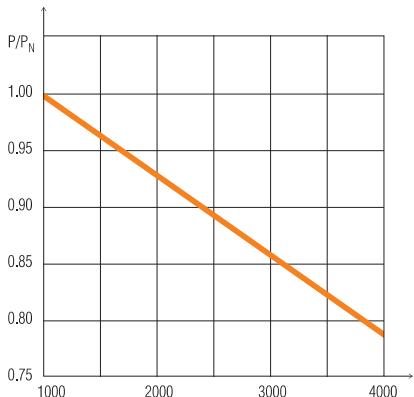

## Performance

Rated power	$\leq 50 \text{ kW} - 0.15 (1-\eta)$
	$> 50 \text{ kW} - 0.10 (1-\eta)$
Power factor	$- \frac{1 - \cos \varphi}{6}$
Slip at rated load and machine heated to operating temperature	+ 20 % of rated slip
Starting torque	- 15 % of rated value + 25 %
Maximum torque	- 10 % of rated value
Starting current	+ 20 % lower limit not prescribed

## Power reduction as temperatures rise

## Power reduction at less cooling

Start-up torque and current are the actual values the motor develops and the current values that cross the power supply cable when voltage is applied to the electric motor. The charts below show the values for both start-up torque and peak torque as well as the start-up current given as multiple of the nominal values.

## Motor torque classification

For the right choice of the motor you not only have to know starting and maximum torque but also the torque curve and speed. To avoid the plotting of torque curves which are unique for each type of motor, the rotor torque class is defined as one of the electric motor's characteristics. This way the suitable motor can be chosen without the (exact) knowledge of the course of the torque curve.

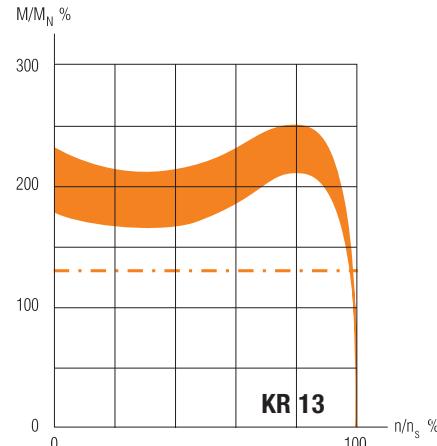

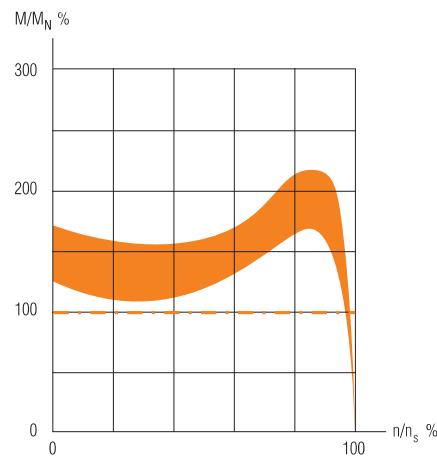

The motor torque class shows the maximum counter-torque for starting the motor. The starting torque class is specified according to the nominal voltage. In this catalog we distinguish three classes:

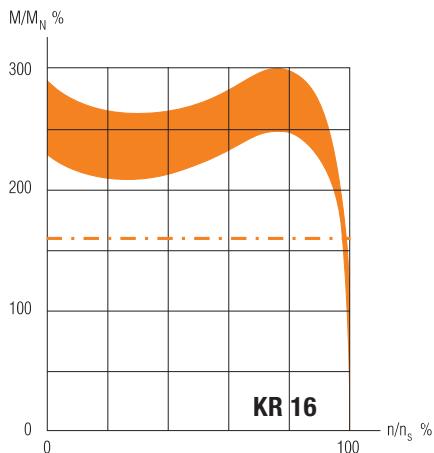

**KR 10**

**KR 13**

**KR 16**

The titles of the torque classes contain numbers which correspond to one tenth (1/10) of the maximum counter-torque value necessary to start up the motor. The following illustrations represent the torque curves of the classes KR 10, KR 13 and KR 16.

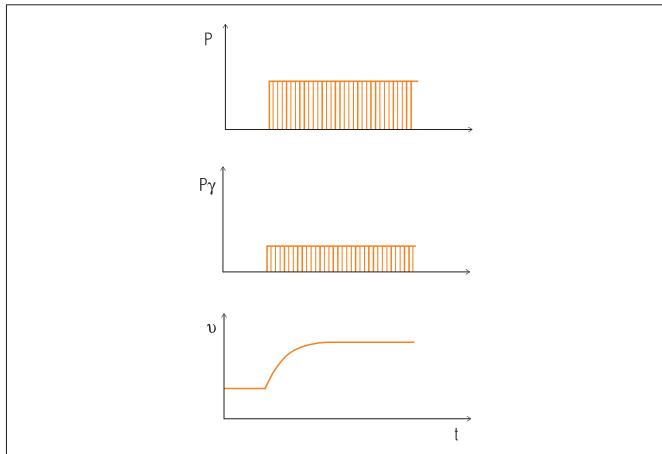

## S1 Continuous duty

Operation under constant load, lasting long enough to allow the machine to reach thermal equilibrium.

Designation: **S1**

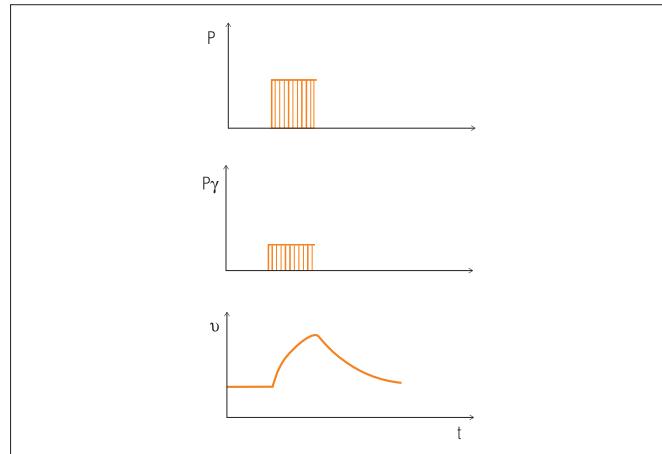

## S2 Short-time duty

Operation under constant load, for a time **too short** to allow the machine to reach thermal equilibrium. Idle time of the machine is long enough to allow the machine to cool down to ambient temperature.

Standard duration of short-term operation:  
10, 30, 60 and 90 minutes.

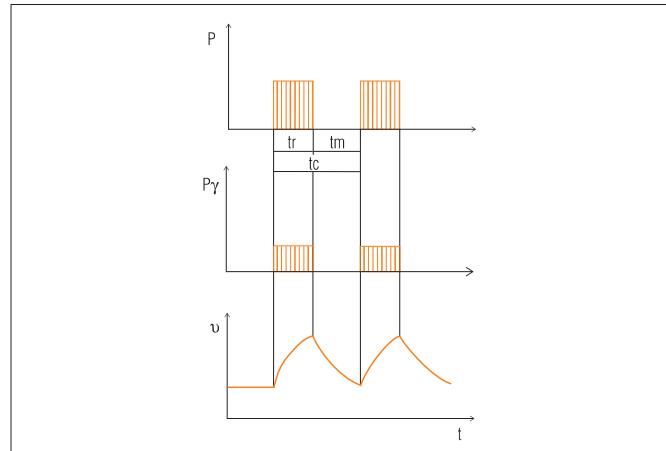

Designation: **S2** 30 minutes.

## S3 Intermittent periodic duty

Operation under repeated, constant load in specified cycles. Neither operating nor resting period are long enough to allow the motor to reach thermal equilibrium. The starting losses are small and do not essentially influence the temperature rise. The nominal values of relative starting time are 15, 25, 40, 60 % at a daily 10-minute cycle.

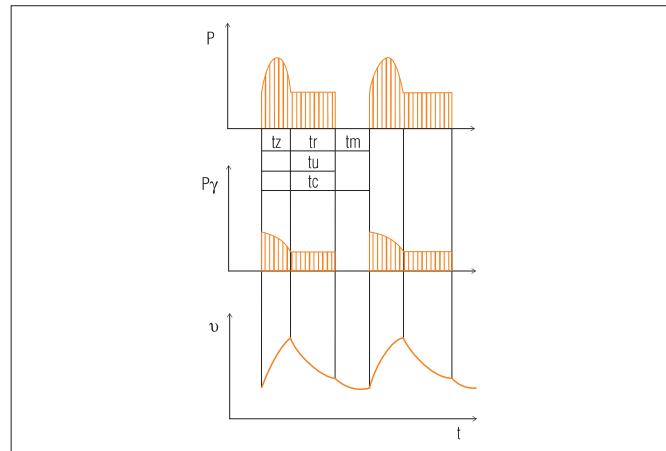

Designation: **S3** 25 %

## S4 Intermittent periodic duty

Operation under repeated, constant load in specified cycles. The start of the motor influences the temperature rise. In order to define this type of operation, the number of cycles (starts per hour) and inertia constant must also be known.

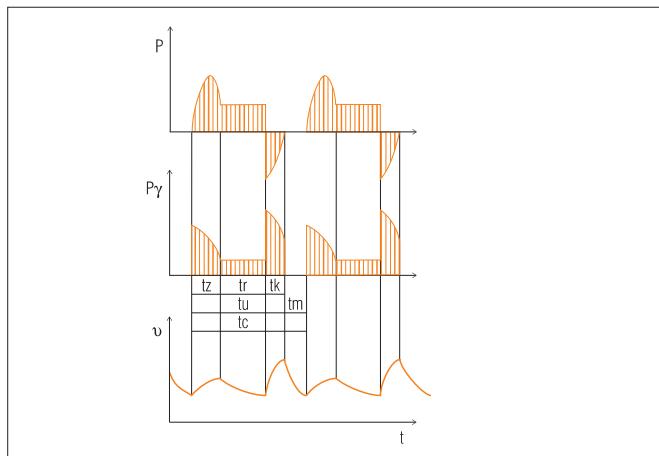

Designation: **S4** 40 %; 120 starts/h; Fl2

## S5 Intermittent periodic duty

Same as S4 operation, except that the electric braking of the machine has an essential influence on the temperature rise.

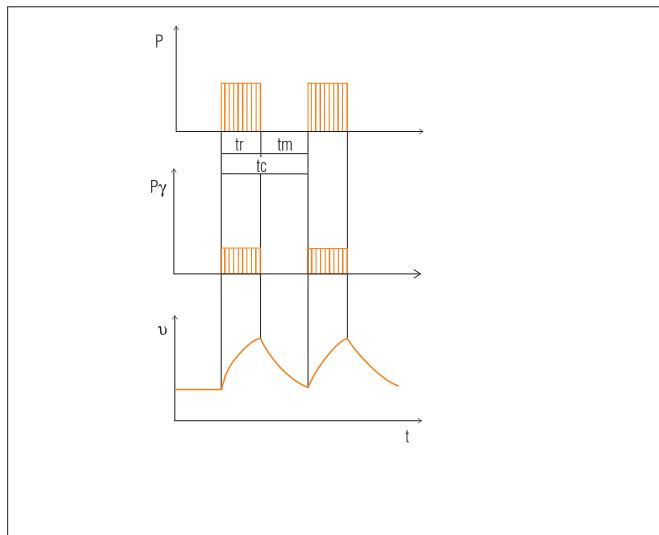

Designation: **S5** 160 %; 120 starts/h; Fl2

## S6 Continuous operation with cyclic load

Operation consisting of a continuous series of equal cycles. Each cycle is made up of a noload and a constant load period. The cycle duration is not long enough to allow the machine to reach thermal equilibrium in one cycle. In order to define S6 operation, the relative starting time must be specified.

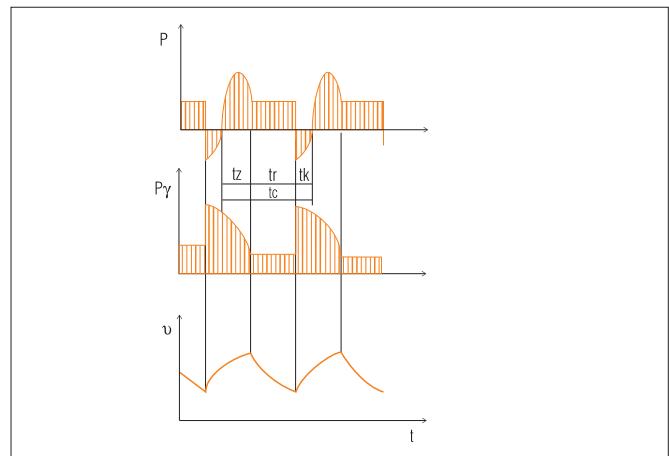

Designation: **S6** 15 %

## S7 Intermittent periodic duty with starting and braking

Uninterrupted operation with a series of constant loading and braking periods. The most demanding type of operation for the motor. In order to define this type of operation, the number of cycles per hour and the inertia constant must be specified.

Designation: **S7** 500 starts/h; Fl3

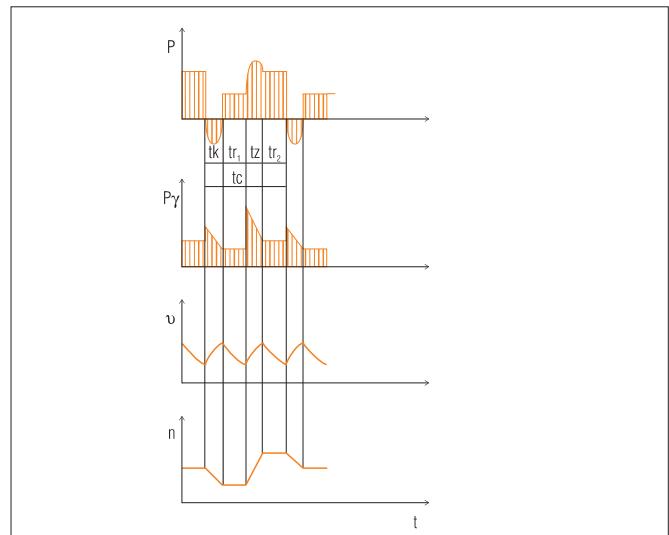

## S8 Intermittent periodic duty with pole changing

This type of operation only exists with pole amplitude modulated motors. In this case the definition of operation must contain the following data for each pole:

- number of starts per hour
- inertia constant
- relative operating period

Designation: **S8** 30 starts/h; Fl10;  $740 \text{ min}^{-1}$ ; 40 %  
**S8** 30 starts/h; Fl10;  $960 \text{ min}^{-1}$ ; 60 %

## S9 Continuous operation with non-periodic load and speed variation (e. g. converter operation)

### General description

The asynchronous motor with its short-circuit rotor and robust construction offers an excellent price-performance ratio. AC motors are designed for constant speed operation. It is not possible to change speed when they are running on fixed frequency supplies. There are drives which require the additional flexibility of smooth speed variations and this is best achieved with the use of an inverter.

Frequency inverters provide an excellent speed and the speed can be varied continuously over the entire frequency range. To avoid overheating, three PTC elements are built into the head of the winding. As the speed rises (higher frequency), the motor becomes louder. Voltage type frequency inverters cause a noise increase of about 7 to 15 dB, current type ones of about 3 dB.

We strongly recommend that you indicate frequency range and working characteristics of the motor ( $T = f(n)$  or  $P = f(n)$ ) when placing your order.

### Power and torque characteristics of motors driven by frequency inverters

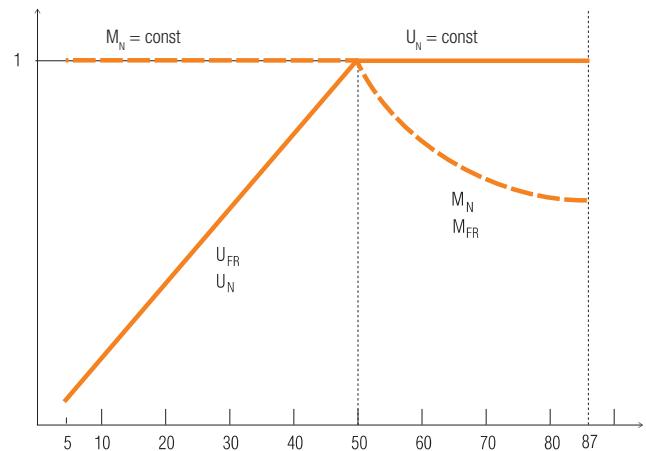

We distinguish two ranges:

- **0 to 50 Hz range**

Here the motor develops its normal torque on the shaft at 5 to 10 Hz of the output frequency (10 to 20 % of the nominal speed). The motor maintains the nominal torque at the shaft until the frequency reaches 50 Hz (100 % of the nominal speed). Voltage keeps rising while the magnetic flux is kept constant. The power increase in this range is linear to the revolutions ( $P = k \times M \times n$ ).

- **50 to 87 Hz range**

Here the torque falls parallel to the speed. The voltage of the motor is maintained on a constant level while the magnetic flux is weaker. The current level is maintained and independent of the speed.

$U_N$  = net voltage

$U_{FR}$  = voltage of frequency inverter

$M_N$  = motor torque on net

$M_{FR}$  = motor torque on frequency inverter

## Mounting dimensions

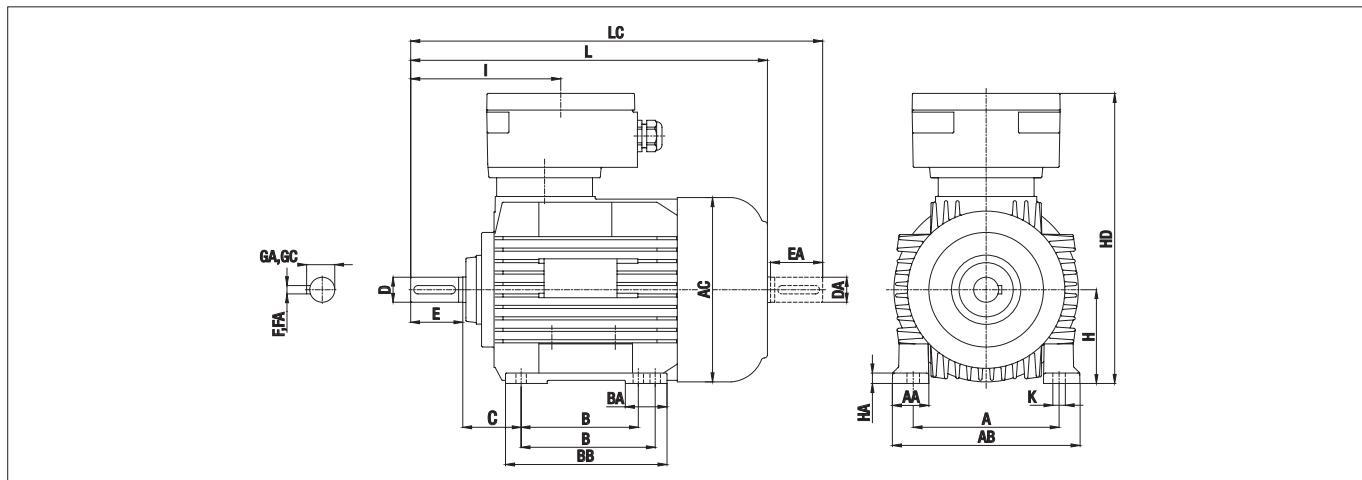

The mounting dimensions allow the following tolerances:

Dimensions	Tolerance	
<b>A, B</b>	$\leq$ 250 mm	$\pm 0.75$ mm
	> 250 mm ... 500 mm	$\pm 1.00$ mm
	> 500 mm ... 750 mm	$\pm 1.50$ mm
<b>H</b>	> 50 mm ... 250 mm	- 0.50 mm
	> 250 mm ... 630 mm	- 1.00 mm
<b>C</b>	$\leq$ 85 mm	$\pm 1.00$ mm
	> 85 mm ... 130 mm	$\pm 2.00$ mm
	> 130 mm ... 240 mm	$\pm 3.00$ mm
	> 240 mm ... 500 mm	$\pm 4.00$ mm
<b>M</b>	$\leq$ 200 mm	$\pm 0.25$ mm
	> 200 mm ... 500 mm	$\pm 0.50$ mm
	> 500 mm	$\pm 1.00$ mm
<b>K and S</b>	$+ 3\%$ diameter	
<b>E</b>	$\leq$ 30 mm	- 0.20 mm
	> 30 mm ... 110 mm	- 0.30 mm
<b>D</b>	$\leq$ $\emptyset 50$ mm	k 6
	$\geq$ $\emptyset 50$ mm	m 6
<b>N</b>	$\leq$ 230 mm	j 6
	$\geq$ 250 mm	h 6

### FLAMEPROOF BRAKE MOTORS, SERIES BM 4KTC

---

General performance	62 - 63
BM 4KTC 2 pole and 4 pole motors 50 Hz	
Dimensions form IM B3	63
Dimensions form IM B5 V1 and IM B3/B5	64
Dimensions form IM B3/B14 and IM B14	65
Quality	66

Our flameproof motors type 4KTC can be supplied with flameproof spring loaded brakes. Brakes type 4BM are always attached on NDE side of motor. Cooling fan is installed on back side of brake which provide high efficiency cooling of brake as well as motor. The electrical connection is made in a separate terminal box on a brake. Technical specification for motors series 4KTC is available in our general catalogues of flameproof motors.

### Features

- Frame size 71-132
- First quality class components
- Robust design for heavy working conditions
- Large terminal box Ex d or Ex de
- Duty type S1-S9
- Frequency drive from 48 up to 6000 rpm
- 50 Hz and 60 Hz
- PTC or Pt100 or PTO thermal protection
- Highest explosion protection for gas and dust
- For Zone 1, 2 and Zone 21, 22
- Up to IP 66
- Ambient temperature from -50 °C up to +85 °C
- ATEX and IECEx certificates

### Explosion protection

Marking ATEX	II 2G Ex d IIC T4 to T6 Gb II 2D Ex de IIIC T4 to T6 Gb II 2D Ex tb IIIC T85 °C to T135 °C Db
Certification	BVS 12 ATEX E 044 X, IECEx BVS 14.0033X

### Technical data

Protection class	up to IP 66
Frequency	50 Hz or 60 Hz
Ambient temperature	-50 °C to +85 °C
Insulation class	F standard, H on request
Duty type	S1 to S9
Material	grey cast iron
Standard colour	RAL 5010, other colours on request

The quality of our products and services is our primary concern. The reliability and high technical level of our systems and components have been confirmed by the internationally accredited test institutes which have awarded us numerous certificates.

With the help of the ISO 9001:2000 certificate the system of quality BARTEC VARNOST is recognizable throughout the world and assures quality from the development to the delivery of a product to the customer.

<u>SPECIAL APPLICATIONS</u>	96

BARTEC VARNOST motor's type 4KTU are approved by CSA for use in division-based hazardous areas. Explosion-proof motors are labeled with the following:

CSA Listing mark for use in Canada and the United States. The product is certified to the applicable American and Canadian standards.  
Certificate: 70013549

## Hazardous area classifications

The division defines how often the potentially explosive materials are present during normal operating conditions

Division 1: ignitable concentrations are present all or most of the time

Division 2: ignitable concentrations are not likely to be present during normal operation

Hazard class	Groups per NEC 500	Substance
<b>Class I</b> Flammable gases/ vapors liquids	Group C	Ethylene
	Group D	Propane
<b>Class II</b> Combustible dust	Group E	Metal dust
	Group F	Coal dust
	Group G	Grain dust
<b>Class III</b> Ignitable fibers and flyings	Not divided into groups +165 °C max. temperature limit for all Class III equipment not subject to overloading +120 °C max. temperature limit for all equipment subject to overloading	

## Surface temperature

The T-Code identifies the maximum absolute motor surface temperature that will develop under any conditions of operation. Surface temperature of BARTEC VARNOST motors will not exceed the following UL and CSA maximums under fault conditions.

T-Code	Maximum motor surface temperature	
	°C	°F
T1	+450	+842
T2	+300	+572
T2A	+280	+536
T2B	+260	+500
T2C	+230	+446
T2D	+215	+419
T3	+200	+392

T-Code	Maximum motor surface temperature	
	°C	°F
T3A	+180	+356
T3B	+165	+329
T3C	+160	+320
T4	+135	+275
T4A	+120	+248
T5	+100	+212
T6	+85	+185

## Marking and name plate

The name plate supplies information determining the motor's construction and performance characteristics

- 1 Serial no.
- 2 Three phase
- 3 Rated operating voltage
- 4 Service duty
- 5 Efficiency
- 6 Frame size
- 7 Enclosure
- 8 Insulation class
- 9 Temperature rise
- 10 Design
- 11 Frequency
- 12 Rated power
- 13 Speed
- 14 Operating current
- 15 Power factor
- 16 Ambient temperature
- 17 Service factor
- 18 Motor weight
- 19 Certification labels
- 20 Service factor current
- 21 NEMA code letters for locked-rotor kVA
- 22 Current at 208 V
- 23 Derating
- 24 Degree of protection
- 25 VFD Supply

## INTRODUCTION

Flame proof AC electric motors are used in hazardous locations or potentially hazardous environments where concentrations of combustible gases, vapors and or dust are present or present some of the time. Motors type 4KTU can be manufactured to NEMA frame size 143 to 365 as well as IEC frame size 71 to 255.

4KTU motors are three-phase, asynchronous electric motors with short circuit rotors explosion-protected according to the:

- "Flame-proof enclosure" for the motor housing and "Increased safety" for terminal box according to UL 60079-1/CSA C22.2 60079-1, UL 60079-7/CSA C22.2 60079-7 and CSA C22.2 No. 30 (Class I, Zone I)
- "Flame-proof enclosure" for the motor housing and "Flame-proof enclosure" for terminal box according to UL 60079-1/CSA C22.2 60079-1 and CSA C22.2 No. 30 (Class I, Zone I)
- Dust Ignition Proof "DIP" (Class II, Division 1) according to CSA C22.2 No. 25
- Dust protected "NI" (Class II, Division 2) according to CSA C22.2 No. 25
- Protection by Enclosure "Ex tb" (Class II, Zone 21) according to UL 60079-31/CSA C22.2 No. 60079-31

The standard electric motor is suitable for T4 to T6 temperature classes or the maximum +257 °F to +185 °F/+125 °C to +85 °C surface temperatures of equipment.

Type 4KTU motors are available in a high efficiency class.

## CONSTRUCTION

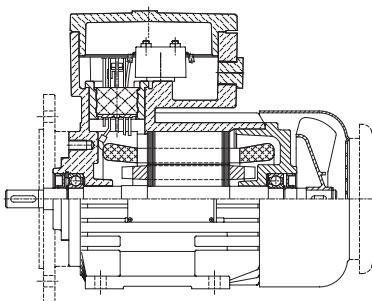

The type 4KTU motors are totally enclosed and fan-cooled (TEFC), as per NEMA MG-1 Part 6. Non-ventilated versions (TENV), air over (TEAO) and with forced ventilation (TEFV) are available.

### Materials

### Basic design

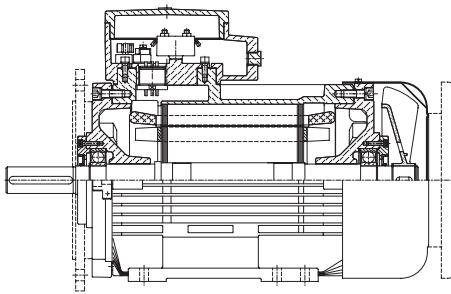

Frame size IEC 71

Frame size IEC 80-132; NEMA 143/5 – 213/5

Frame size IEC 160-225; NEMA 254/6 – 364/5

The following table lists the bearings used in different motors. Only the latest and most innovative bearings of well-renowned producers are used in our motors. Upon customer request, we equipped the motors with other bearings (depending on the respective construction).

On both sides drive and non-drive, a Pt100 probe can be installed that monitors the temperature of the bearings.

Lubricants and seals used in bearings are suitable to operate at the maximum temperatures of the bearings.

Frame size	Poles	DE bearing	NDE bearing	Bearing dishes
143T	2, 4, 6, 8	6205	6205	25 x 52 x 15
145T	2, 4, 6, 8			
182T	2, 4, 6, 8	6206	6206	30 x 62 x 16
184T	2, 4, 6, 8			
213T	2, 4, 6, 8	6208	6208	40 x 80 x 18
215T	2, 4, 6, 8			
254T	2, 4, 6, 8	6309	6309	45 x 100 x 25
256T	2, 4, 6, 8			
284TS	2, 4, 6, 8	6310	6310	50 x 110 x 27
286TS	2, 4, 6, 8			
324TS	2, 4, 6, 8	6312	6312	60 x 130 x 31

## Bearing assemblies

	Frame size 143 – 213/5 IEC 90-132	Frame size 254/6 – 364/5 IEC 160-225
Drive end		
Non-drive end		

## Bearing lubrication

Motors are normally fitted with permanently greased bearings type 2Z. These bearings are greased for life.

## Motors fitted with grease nipples

Motors from frame size 254T and above can be fitted with re-greasable bearings. Lubricate the motor during its operation. If the motor is fitted with a lubrication plate, use the value given, or use the values listed in the according table.

The effectiveness of motor lubrication should be checked by measuring the surface temperature of the bearing end shield during normal operating conditions. If the measured temperature is +176 °F/+80 °C or above, the intervals between re-lubrications must be shortened. The re-lubrication interval should be halved for every 15 K increase in bearing temperature. If this is not possible then use lubricants that are suitable for high operating temperature conditions.

## Ball bearings: lubrication intervals in duty hours

Frame size	Amount of grease [Lb]	Speed of the motor [rpm]					
		3600	3000	1800	1500	1000	500
254T	0.06	7000	9500	14000	17000	21000	24000
256T							
284T	0.07	6000	8000	13500	16000	20000	23000
286T							
324T	0.09	4000	6000	11000	13000	17000	21000
326T							
364/5T	0.12	3000	5000	10000	12500	16500	20000

At the ambient temperature of  $\leq +77^{\circ}\text{F}/+25^{\circ}\text{C}$ , the grease lifespan can be expected to double, however, 33000 hours is the maximum.

In case of frequency inverters and in continuous operation at very low speed, as well as at low temperature, the lubrication capabilities of standard greases may not be sufficient and special greases with additives are needed.

If motors are equipped with sealed bearings (i.e. bearings greased for life), any deviation in the operating temperature from the design temperature will result in change in the lifespan of the bearings.

The use of conductive greases to eliminate bearing currents is not recommended due to their poor lubrication characteristics and low conductivity.

Re-greasing or replacing the grease is only allowed using a grease of equal quality (same saponification component or consistency).

**Shaft ends**

The standard electric motor is equipped with one free shaft extension. On request we can also supply versions with free shaft extensions on both sides.

Type 4KTU motors can be supplied with stainless steel shafts (AISI 316 and AISI 420) for highly corrosive environments.

The dimensions of shaft ends correspond to the NEMA MG-1 standard. Tolerances for shaft end-diameters are in accordance with NEMA MG-1, Part 4, Point 9.

- up to a diameter of 1.5000 in (+0.000/-0.005 in)
- more than 1.5000 in (+0.000/-0.001 in)

Free shaft extensions are equipped with keyways. Keyways and keys correspond to NEMA MG-1, Part 4

The shafts have a threaded central hole for the drawing in, drawing out and fixing connections.

**Shaft diameter**

0.875 in	1.125 in	1.375 in	1.625 in	1.875 in	2.125 in

	8	720	650	830
284/6T	2	610	540	710
	4	730	650	850
	6	850	760	1010
	8	990	910	1120
324/6T	2	650	540	820
	4	800	690	990
	6	960	830	1170
	8	1090	970	1300
364/5T	2	790	620	1050
	4	1000	810	1280
	6	1190	980	1530
	8	1370	1170	1690

The load rating of bearings has been calculated for at least 20000 operating hours at a frequency of 60 Hz. Only the axial loads have been taken into account. If the load is made of axial and radial loads, the working lifespan of bearings is shorter.

The terminal box of type 4KTU motors are made of cast iron which is the same material used to produce the frame.

The standard terminal box is made in assembly F-1, but it can be produced also in F-2 and F-3.

F-1

F-2

F-3

The terminal box can be repositioned in steps of 90° to 180° to suit the application.

Electric motors are designed with the terminal box in equipment protection:

- Increased safety "Ex e", according to UL 60079-7 and CSA C22.2 No. 60079-7. (for IEC frames only)
- Flame-proof enclosures "Ex d", according to UL 60079-0, CSA C22.2 No. 60079-0, UL 60079-1 and CSA C22.2 No. 60079-1.

There is a direct cable entry available for all motors.

**Ex d terminal box**

Terminal boxes can have either metric or NPT threaded entries:

**Terminal box entries**

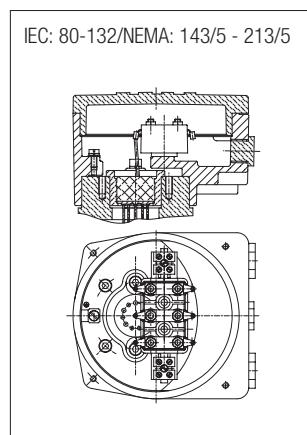

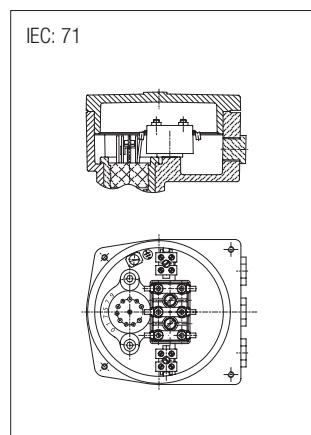

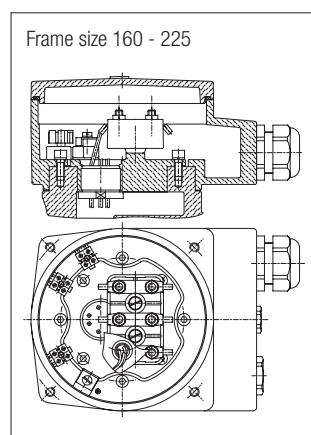

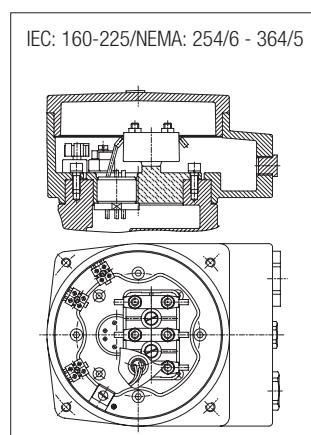

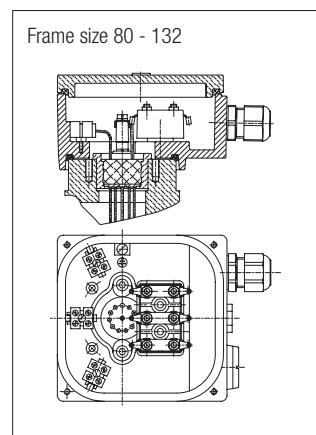

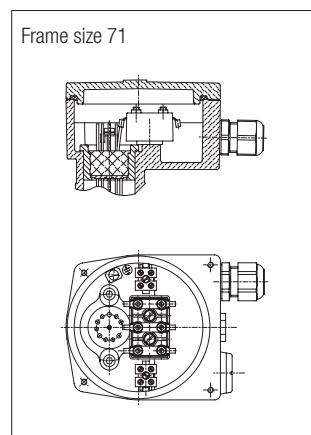

IEC frame	NEMA frame	Metric	NPT
63	-	2 x M25 + 1 x M20	
71	-		
80	-		3/4"
90	143/5		
100	-	2 x M25 + 1 x M20	
112	182/4		
132	213/5		1"
160	254/6		
180	284/6		
200	324/6	2 x M50 + 2 x M20	
225	364/5		2"

Motors can also be connected with rigid metal conduit, of which the size and lengths are in accordance with this table:

**Rigid conduit sizes and lengths**

IEC frame	NEMA frame	Thread size		Length
		Metric	NPT	
63	-	2 x M25 + 1 x M20		
71	-			
80	-		3/4"	
90	143/5			
100	-	3 x M32		2ft
112	182/4			
132	213/5		1"	
160	254/6			
180	284/6			
200	324/6	2 x M50 + 2 x M20	2"	18"
225	364/5			

The Ex d terminal box has a threaded entry to accept Ex d cable glands or rigid metal conduit. In a terminal box, there can be 6 or 12 main connection terminals and 6 additional terminals for PTC sensors, heaters, etc. Each terminal box has one earth connection terminal.

**Ex d terminal box****Ex e terminal box (IEC frames only)**

In the terminal box with increased safety and cable glands according to UL 60079-0, CSA C22.2 No. 60079-0, UL 60079-7 and CSA C22.2 No. 60079-7 are used. Cable glands are fitted for this purpose and are separately certified.

## IP protection

Type 4KTU motors are supplied with a rating of the degree of protection in conformance with NEMA MG-1 Part 5.

The standard degree of protection for type 4KTU motors is IP 55 for Class I and IP 64 for Class II.

### Protection against environmental influences IP protection

Protection class	Protection against harmful contact and ingress of solids (1st Numeral)
IP 44	Protection against direct contact with electrically live and rotating inner parts using tools, wire or similar objects with a diameter exceeding 1 mm. Protection against ingress of solids (diameter > 1 mm). Fan air outlets and water exhausts may have a second-degree level of protection.
IP 54/ IP 55/ IP 56	Complete protection against contact with electrically live and moving rotating inner parts. Protection against harmful ingress of dust. Ingress of dust is not fully pre-vented, but must not reach an extend causing harmful effects to machine operation.
IP 65*	Complete protection against contact with electrically live parts and rotating inner parts. Protection against ingress of dust (dust-proof machine).

Protection class	Protection against ingress of water (2nd Numeral)
IP 44/ IP 54	Water particles spraying from any direction do not have any harmful effects on the machine (i. e. rain).
IP 55/ IP 65*	A jet of water spraying from any direction does not have any harmful effects on the machine.
IP 56	During rough seas water must not penetrate into the interior of the motor to such an extend as to cause damage to the machine (deck-mounted motors).

\* All vertically-mounted electric motors with free shaft extension on the top must be protected against particles falling into the fan cover. This protection is not necessary if the machine itself has such a protection. Electric motors mounted outdoors must be protected against exposure to direct sunlight.

## Paintwork

### Surface protection against environmental influences

	Anti-corrosion protection 2 (standard)	Anti-corrosion protection 3 (special)	Special surface protection
Surface	sanding and degreasing	sanding and degreasing	
Undercoating	Epoxi-ester	Epoxi-ester	
Intermediate Coating 1	-	Epoxi	
Intermediate Coating 2	-	Epoxi	
Finishing	Vinyl-Acryl	Epoxi	
Total thickness	140 µm	180 µm	
Colour	blue, RAL 5024	blue, RAL 5024	
Protection against corrosion in environments with water	high humidity, steam, sea water	high humidity, steam, sea water	Products with surface protection for marine/offshore and tropical conditions are available on special request
Environments resistance	periodic spilling or spraying of anorganic acids and lyes	periodic spilling or spraying of anorganic acids and lyes	
Temperature resistance	-40 °C to +130 °C/-40 °F to +266 °F	-40 °C to +130 °C/-40 °F to +266 °F	
Suitable for	normal industrial atmospheres, relatively high humidity and high content of salt and aggressive gases (SO <sub>2</sub> , NO <sub>x</sub> )	Chemically aggressive atmospheres, high content of salt and aggressive gases (SO <sub>2</sub> , NO <sub>x</sub> ). Condensation of moisture and electrolytes on surface. Solvents and oil derivatives have negative effects.	

4KTU motors can be supplied with NEMA or IEC mounting forms.

#### NEMA mounting form

Motors are supplied, as standard, in the F-1 configuration with the terminal box on the left-hand side of the motor frame.

The mounting configuration for type 4KTU motors complies with NEMA MG-1 Part 4. Standard mounting forms and their variations:

#### Floor mountings

	ASSEMBLY F-1	ASSEMBLY F-2	ASSEMBLY F-3
ASSEMBLY W-1	ASSEMBLY W-2	ASSEMBLY W-3	ASSEMBLY W-4
ASSEMBLY W-5	ASSEMBLY W-6	ASSEMBLY W-7	ASSEMBLY W-8
ASSEMBLY W-9	ASSEMBLY W-10	ASSEMBLY W-11	ASSEMBLY W-12

3

#### Ceiling mountings

	ASSEMBLY C-1	ASSEMBLY C-2	ASSEMBLY C-3

**IEC mounting form**

Motors are supplied, as standard, with the terminal box on the left-hand side of the motor frame. The mounting form complies with IEC 60 034-7 Standard mounting forms and their variations:

IEC code I	IM B3	IM B5	IM B34	IM B14	IM B35
IEC code II	IM 1001	IM 3001	IM 2101	IM 3601	IM 2001
IEC code I	IM V6	IM V3	IM V6/IM V19	IM V19	IM V36
IEC code II	IM 1031	IM 3031		IM 3631	IM 2031
IEC code I	IM V5	IM V1	IM V5/IM V18	IM V18	IM V15
IEC code II	IM 1011	IM 3011		IM 3611	IM 2011

**Power voltage and service factor**

The power ratings given in the tables are valid for operating under continuous load (S 1) at a rated voltage, a frequency of 60 Hz. temperature of up to +104 °F/+40 °C and an altitude of less than 1000 m above sea level. The data in the tables refer to 230/460 V.

NEMA MG-1 Part 12 states that the motor operates successfully under running conditions at a load with a variation in the voltage or frequency of up to the following:

- ±10 % of the rated voltage with rated frequency
- ±5 % of the rated frequency with rated voltage
- a combined variation in voltage and frequency of 10 % (sum of absolute values) of the rated values, provided the frequency variation does not exceed ±5 % of the rated frequency

The Motor Service Factor (SF) is the percentage of overloading that the motor can handle for short periods when operating normally within the correct voltage tolerances.

4KTU motors has a SF of 1.0 and 1.1.

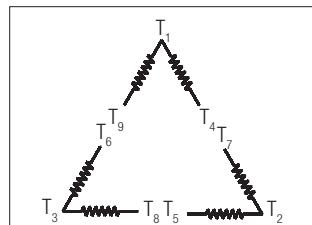

**Rated values under extreme working conditions**

When electric motors are used at temperatures above +104 °F/+40 °C or at altitudes of more than 1000 m above sea level, the permitted overtemperature for windings is lower and the rated power is reduced respectively. The relation between rated power, ambient temperature, and altitude is shown in this table:

T (°F/°C)	Altitude (m)							
	1000	1500	2000	2500	3000	3500	4000	4500
10/50							0.97	0.92
15/59						0.96	0.94	0.90
20/68					1.00	0.95	0.91	0.87
25/77					1.00	0.95	0.93	0.80
30/86			1.00	0.96	0.92	0.90	0.86	0.82
35/95		1.00	0.95	0.93	0.90	0.88	0.84	0.80
<b>40/104</b>	<b>1.00</b>	<b>0.97</b>	<b>0.94</b>	<b>0.90</b>	<b>0.86</b>	<b>0.82</b>	<b>0.80</b>	<b>0.76</b>
45/113	0.95	0.92	0.90	0.88	0.85	0.81	0.76	0.74
50/122	0.92	0.92	0.87	0.85	0.82	0.80	0.77	0.72
55/131	0.88	0.85	0.83	0.81	0.78	0.76	0.73	0.70
60/140	0.83	0.82	0.80	0.77	0.75	0.73	0.70	0.67

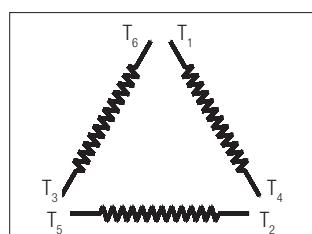

Materials of thermal class F are used for the production of stator windings. They are designed to withstand an overtemperature of 80 K at maximum ambient temperature of +104 °F/+40 °C. Electric motors operating under heavy conditions, conditions requiring frequent start-ups or ambient temperatures above +104 °F/+40 °C employ special insulation thermal class H and are available on special request.

Two speed motors with 2 : 1 speed ratio use Dahlander windings. Electric motors with pole relation of 4/8 or 8/6 have two separate stator windings in star connection.

Constant power

**Motor protection**

Continuous duty motors must be protected from overload based on operating temperature or based on operating current. For overload protection based on operating temperature 4KTU motors can have built into the winding following sensors:

**PTC thermistor**

We use three PTC in serial connection, one per each phase. The nominal shutdown temperature is +248 °F/+120 °C.

**PTO thermostat**

There are three PTO, one per phase in serial connection with NC or NO contacts.

The nominal shutdown temperature is +248 °F/+120 °C.

There are also other types of thermal protection available: Pt100; KTY83/84

**Space heaters**

Space heaters must be applied when motors are intended to be used below -4 °F/-20 °C or for anti-condensation purposes.

**Space heaters**

Frame size (NEMA)	Frame size (IEC)	Power	Voltage
-	71	12.5 W	
-	80	25 W	
143, 145	90	25 W	
-	100	25 W	
182, 184	112	50 W

324, 326	200	200 W	
364, 365	225	200 W	110 V or 230 V

**Duty cycles****S1 Continuous duty**

Operation under constant load, lasting long enough to allow the machine to reach thermal equilibrium.

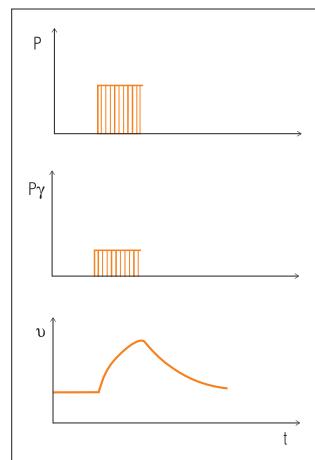

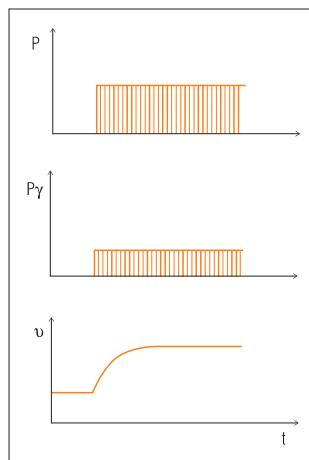

Designation: **S1**

**S2 Short-time duty**

Operation under constant load, for a time too short to allow the machine to reach thermal equilibrium. Idle time of the machine is long enough to allow the machine to cool down to ambient temperature.

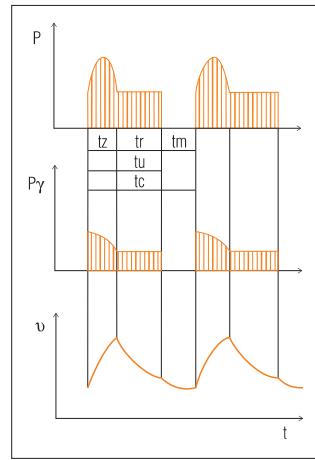

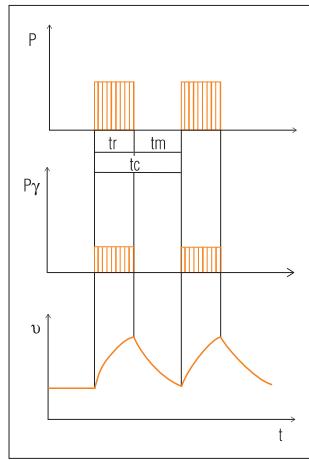

Standard duration of short-term operation: 10, 30, 60 and 90 min.

Designation: **S2** 30 minutes.

**S3 Intermittent periodic duty**

Operation under repeated, constant load in specified cycles. Neither operating nor resting period are long enough to allow the motor to reach thermal equilibrium. The starting losses are small and do not essentially influence the temperature rise. The nominal values of relative starting time are 15, 25, 40, 60 % at a daily 10-minute cycle.

Designation: **S3** 25 %

**S5 Intermittent periodic duty**

Same as S4 operation, except that the electric braking of the machine has an essential influence on the temperature rise.

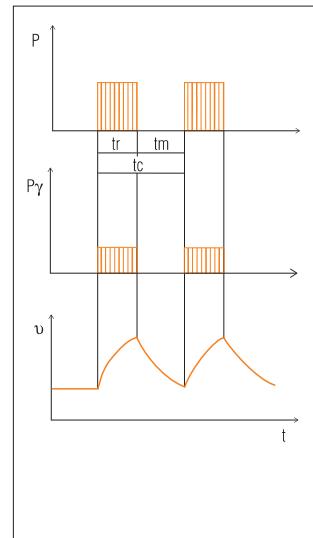

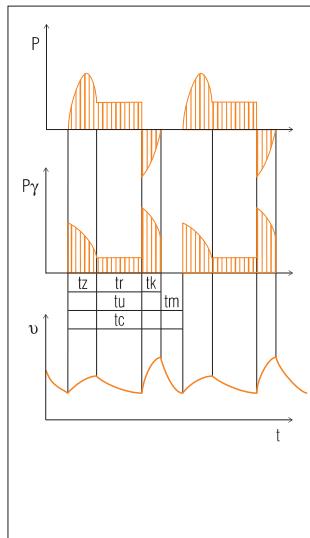

Designation:

**S5** 160 %; 120 starts/h; Fl2

**S6 Continuous operation with cyclic load**

Operation consisting of a continuous series of equal cycles. Each cycle is made up of a no load and a constant load period. The cycle duration is not long enough to allow the machine to reach thermal equilibrium in one cycle. In order to define S6 operation, the relative starting time must be specified.

Designation: **S6** 15 %

**S7 Intermittent periodic duty with starting and braking**

Uninterrupted operation with a series of constant loading and braking periods. The most demanding type of operation for the motor. In order to define this type of operation, the number of cycles per hour and the inertia constant must be specified.

Designation: **S7** 500 starts/h; Fl3

**S8 Intermittent periodic duty with pole changing**

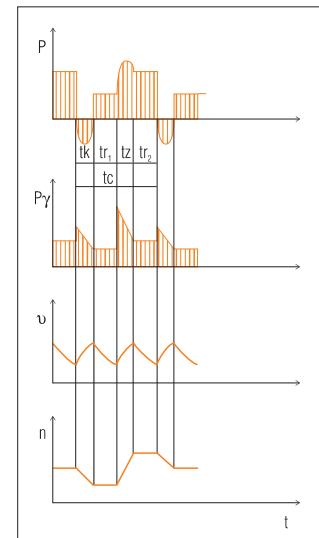

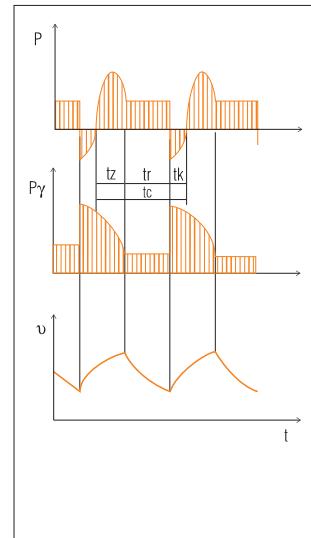

This type of operation only exists with pole amplitude modulated motors. In this case the definition of operation must contain the following data for each pole:

- number of starts per hour
- inertia constant
- relative operating period

Designation:

**S8** 30 starts/h; Fl10; 740 min<sup>-1</sup>; 40 %

**S8** 30 starts/h; Fl10; 960 min<sup>-1</sup>; 60 %

**S9 Continuous operation with non-periodic load and speed variation (e.g. converter operation)**

## Direct cable entries

Motors type 4KTU can be produced without a terminal box. This application is very suitable for machines with limited space for example those using axial fans. For this application we use special flameproof cable entries. The type of cables, cross section and length can be adapted as per request.

There is a place for grounding the cable entry from inside the terminal plate.

The dimension of the motors with direct cable entries please see the relevant table at the end of the brochure.

## Motors with brakes

Type 4KTU motors can be equipped with brakes, which are separately certified for suitable explosion protection. The brake can be mounted on the drive end or non-drive end of the motor. The electrical connection of brakes is made in a separate terminal box on the brake.

The electrical, as well as mechanical, characteristics of the brakes is not part of this catalogue and can be found in the brake catalogue.

The dimension of the motors with direct cable entries please see the relevant table at the end of the brochure.

## Motors with encoders

Type 4KTU motors can be supplied with encoders for speed control or for positioning. Encoders can be fitted onto motors with either forced ventilation or with shaft mounted cooling fans (TEFC).

Encoders are separately certified for suitable explosion protection. We usually use encoders from the brands Kuebler or Liende&Liende. Other encoder brands can also be used.

The dimensions of motors with encoders please see the relevant table at the end of the brochure.

## Forced cooling

Type 4KTU can be run with a frequency inverter. When you want to run the motor below 30 Hz, cooling is not enough. In those cases, a forced ventilation kit can be supplied for type 4KTU motors, which consist of one additional independent motor that drives the fan of the main motor.

The dimension of the motors with direct cable entries please see the relevant table at the end of the brochure.

### Electrical data for variable speed motors

#### General description

The asynchronous motor with its short-circuit and robust construction offers an excellent price-performance ratio. AC motors are designed for constant speed operation. It is not possible to change speed when they are running on fixed frequency supplies. There are drives which require the additional flexibility of smooth speed variations and this is best achieved with the use of an inverter.

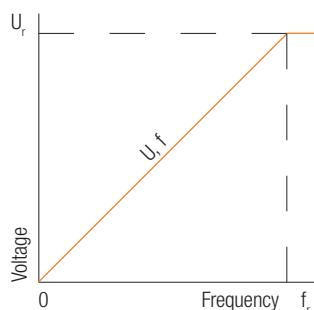

Frequency inverters provide an excellent speed and the speed can be varied continuously over the entire frequency range. To avoid overheating, three PTC elements are built into the head of the winding. As the speed rises (higher frequency), the motor becomes louder. Voltage type frequency inverters cause a noise increase of about 7 to 15 dB, current ones of about 3 dB.

We strongly recommend that you indicate frequency range and working characteristics of the motor ( $T = f(n)$  or  $P = f(n)$ ) when placing your order.

### Power and torque characteristics of motors driven by frequency inverters

The ratio  $U/f$  is constant in range from 0 Hz to motor rated frequency. From rated frequency upwards the voltage is kept constant at its rated value, while the motor (on the stator windings) frequency keeps growing.

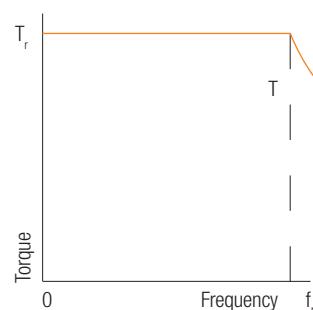

Range above the rated frequency is known as field weakening, where flux decreases as a result of frequency increase, causing the motor torque to decrease gradually.

#### Where

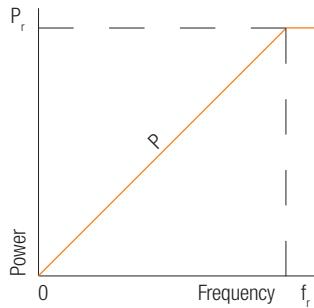

- $U_r$ : rated stator voltage
- $f_r$ : rated stator frequency
- $U$ : stator voltage
- $f$ : stator frequency

The output is proportional to torque time speed, it grows linearly up to the rated frequency and from that point upwards it is kept constant.

#### Where

- $T_r$ : rated torque
- $T$ : torque available on the shaft

#### Where

- $P_r$ : rated power
- $P$ : power available on the shaft

### Variable speed drive application

Type 4KTU motors are designed and certified for variable speed applications in the following ranges:

Frequency range: from 5 Hz to 87 Hz

Speed range:  $75 \text{ min}^{-1}$  to  $5220 \text{ min}^{-1}$

There are also pole-switching motors available with standard ratios of 4/2, 8/4, 6/4, 8/6. Other ratios are possible upon request.

To avoid overheating, three PTC thermistors are built into the head of the winding. When you want to run the motor below 30 Hz, cooling is not enough, and forced cooling must be used.

### Power and torque characteristics of motors driven by frequency inverters

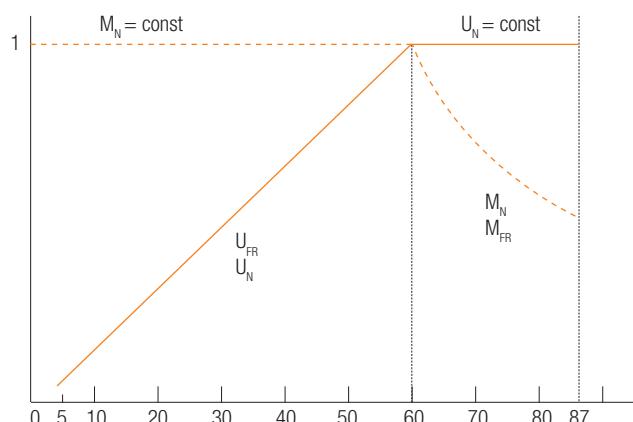

We distinguish two ranges:

#### 5 Hz to 60 Hz

Here, the motor develops normal torque on the shaft at 5 Hz to 10 Hz of its output frequency (10 to 20 % of nominal speed). The motor maintains normal torque at the shaft until the frequency reaches 60 Hz (100 % of the nominal speed). Voltage keeps rising while the magnetic flux is kept constant. The power increase in this range is linear to the revolution ( $P = k \times M \times n$ )

#### 60 Hz to 87 Hz

Here the torque is parallel to the speed. The voltage of the motor is maintained on a constant level while the magnetic flux is weaker. The current level is maintained and independent of the speed.

$M_N$ : net torque

$U_N$ : net voltage

$U_{FR}$ : voltage of frequency inverter

$M_N$ : motor torque on net

$M_{FR}$ : motor torque on frequency inverter

SUBMERSIBLE MOTORS, SERIES 4 KTS

---

**Submersible flameproof motors IP 68**

Our experience in hazardous areas and our flexibility permit us to answer the most special requirements for different applications of flameproof motors. Industrial areas where motors should sometimes run under water and sometimes in hazardous areas, for example in sewage systems for drive pumps, grinders, valves, etc.

- Maximal depth 12 m
- TENV – Totaly enclosed, non ventilated
- Thermal overload protection with PTC or PTO
- Insulation class F
- Modular construction

**Explosion protection**

**Technical data**

Frame sizes	71-80-90-100-112-132-160-180-200-225-250-280-315
Power	0.18 kW to 200 kW
Voltage	380 V to 1140 V
Operating duty	S1 to S10, ready for operating with frequency inverters
Frequency	50 Hz and 60 Hz
Single speed	2, 4, 6, 8 pole
Pole changing	4/2, 8/4, 6/4, 8/6, other versions on request

Insulation class	F and H
Protection class	IP 55, possible up to IP 65
Ambient temperature	-20 °C to +40 °C
Termal protection in winding	3 x PTC, possible also PTO or Pt100
Termal protection in bearings	PTC, PTO or Pt100
Anticondensation protection	Heaters in winding AC 220 V
Additional regreasing	grease nipples
Cooling	air, TEFC
Material of enclosure	Cast iron
Cable glands	1 x for power supply, 1 x for protection, Ex e or Ex d

**Explosion protection**

Marking	I M2 Ex de I Mb, I M2 Ex dbe I Mb I M2 Ex d I Mb, I M2 Ex db I Mb PB Ex d I Mb
---------	--

**Technical data**

Frame sizes	180-200-225-250-280-315-355
Power	22 kW to 400 kW
Voltage	380 V to 1140 V
Operating duty	S1 to S10, ready for operating with frequency inverters
Frequency	50 Hz and 60 Hz
Single speed	2, 4, 6, 8 pole
Pole changing	4/2, 8/4, 6/4, 8/6, other versions on request
Insulation class	F and H

Protection class	IP 55, possible up to IP 65
Ambient temperature	-20 °C to +40 °C
Termal protection in winding	3 x PTC, possible also PTO or Pt100
Termal protection in bearings	PTC, PTO or Pt100
Anticondensation protection	Heaters in winding AC 220 V
Additional regreasing	grease nipples
Cooling	air, TEFC
Material of enclosure	welded steel plates
Cable glands	1 x for power supply, 1 x for protection, Ex e or Ex d

**Technical data**

Frame sizes	180-200-225-250-280-315-355
Power	22 kW to 400 kW
Voltage	380 V to 1140 V
Operating duty	S1 to S10, ready for operating with frequency inverters
Frequency	50 Hz and 60 Hz
Single speed	2, 4, 6, 8 pole
Pole changing	4/2, 8/4, 6/4, 8/6, other versions on request
Insulation class	F and H

Insulation class	F and H
Protection class	IP 55, possible up to IP 65
Ambient temperature	-20 °C to +40 °C
Termal protection in winding	3 x PTC, possible also PTO or Pt100
Termal protection in bearings	PTC, PTO or Pt100
Anticondensation protection	Heaters in winding AC 220 V
Additional regreasing	grease nipples
Cooling	air, TEFC
Material of enclosure	welded steel plates
Cable glands	1 x for power supply, 1 x for protection, Ex e or Ex d

When the motor is driven with frequency inverter additional motor for forced cooling is necessary. Technical data for main motors as well as for forced cooling motors see above. The motor can be equipped also with flame proof encoders.

### Ordering data

- rating in kW
- voltage and frequency
- r.p.m.
- type of motor arrangement (form IM ..)
- mechanical requirements
- special requirements (i.e. H-class thermal insulation, two-shaft, radial bearing seals...).
